

Remote HSM Manager – Available Soon

With firmware release v3.1, the HSM 8000 can be managed from a remote location via a Thales-supplied application, known as the Remote HSM Manager. The Remote HSM Manager is an application that operates within a secure environment, and provides users with all the functionality that is currently possible using the traditional console interface.

The Remote HSM Manager provides the following features:

- HSM Configuration - communications ports settings, security settings, etc.
- HSM Installation - generation & installation of LMK from smartcards
- HSM Key Management - generation, import, export, etc of keys
- HSM Maintenance - viewing/erasing of audit/error logs, version info, etc
- HSM State Changes - transitions between Online, Offline, Secure

The new functionality is scheduled for release in early Q2. If you would like more details in the meantime, please contact your Thales authorised supplier.
